TECHNICAL SKILLS

Skills: Machine Learning, AI, Data Science, Generative AI, LLMs, AI Agents, Deep Learning, NLP, Data Analysis, Feature Engineering, Database

Languages: Python, C, C++, HTML

Developer Tools: Jupyter Notebook, VS Code, Excel, PowerBI Desktop

EXPERIENCE

Associative software engineer

Oct. 2024 – Present

Accenture

Bengaluru

- Developed a **Conversational FAQ Bot** using **BERT embeddings**, **LangChain**, and **FAISS** to deliver accurate answers from internal knowledge bases.
- Implemented a **Retrieval-Augmented Generation (RAG)** pipeline integrating the **OpenAI GPT** API for context-aware, human-like responses.
- Deployed the bot using **FastAPI** and **Docker** on **AWS Lambda**, enabling scalable real-time query handling across the organization.
- Engineered **vector indexing** and **approximate nearest neighbor** search to optimize retrieval speed, reducing mean query latency from approx **3s** and **less than 1s**.

Software Development Intern

Apr 2023 – Oct 2023

Invictus Engineer

Hyderabad, TS

- Built a **web scraping algorithm** to extract real-time pricing from **20+ e-commerce sites**, automating aggregation and reducing data collection time by **40%**.
- Developed an **automation model with Python & ML** to generate personalized emails, increasing **open rates by 45%** and reducing **bounce rates by 30%**.
- Designed a **decision-making matrix** using collaborative team feedback, improving **project completion efficiency by 20%** and reducing **errors by 15%**.

PROJECTS

Emotion Infused Music Recommendation System | *Python, Deep Learning, Machine Learning* | [Source](#) Apr 2023

- Built a **music recommendation system** combining audio and emotion data, increasing **user engagement by 40%** and **premium subscriptions by 25%**.
- Used **MTCNN** for **emotion detection from facial expressions**, improving accuracy and reducing errors by **20%**.
- Integrated **Spotify API** to recommend **top 15 songs** based on emotions like Happy, Sad, Angry, Fear, Surprise, and Neutral.

Unemployment Analysis | *Python, Statistics, Machine learning* | [Source](#)

May 2018 – May 2020

- Developed a **Time-series forecasting model** using **ARIMA** and **LSTM** to predict unemployment rates with **95% accuracy** over a two-year horizon.
- Processed and analyzed **30+ years of historical data**, integrating **20+ macroeconomic indicators** for feature-rich model training.
- Optimized model hyperparameters and evaluation metrics, achieving a **30% reduction in forecasting error** vs. baseline methods.

EDUCATION

Institute of Aeronautical Engineering

Bachelor of Technology in Computer Science Engineering

Hyderabad, Telangana

Dec. 2020 – May 2024
